#### **Indicator Definition:**

# ICH Improvement/Stabilization at Discharge Rate:

<u>Definition</u>: Proportion of ICH patients with <u>discharge</u> <u>GCS/NIHSS</u>

(Medical Knowledge) better than (Numerical Computation)

<u>admission</u> (Multi-Sources) score relative to total ICH patients.

Calculation Formula:

 $Rate = \frac{Patients \text{ with discharge GCS or NIHSS better than admission score}}{Total \text{ ICH Patients}};$ 

### Step1: Recall emrs according to denominator rule

### **Step2: Check if emrs meet numerator rule**

**ISSUE**: Dose patient notes meet the numerator rule [ICH patients with discharge GCS/NIHSS better than admission score]? True/False

**ID:001 Admission**: GCS 13... **Discharge**: GCS 15...

CS 15...

ID:n Admission: GCS 15...

Discharge: GCS 14...

GCS, 13 < 15

True

...

GCS, 15 > 14

False

## **Step3: Statistical result**

[Number of True] / [Number of Total ICH patients].
